# Automated Feed System

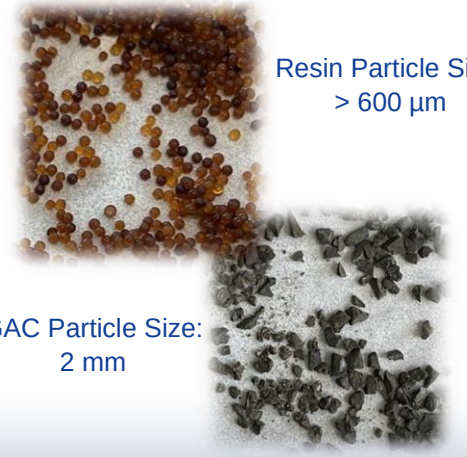
AxNano's Automated Feed Management System (AFS) delivers cutting-edge solutions for particle reduction, solid-liquid control, and mixing, tailored for the management of complex waste streams. This proprietary system creates a homogenous mixture, supporting continuous flow and process of a diverse range of waste types. By optimizing conditions for technologies like SCWO, it ensures thorough waste destruction, significantly reducing long-term liabilities.

- Key Specifications:
  - Power: 480 VAC @ 30A
  - Water Provisions: 10+ GPM
  - Footprint: 10' x 6'
  - Weight: 3,000 lbs
- Effective treatment of waste types:
  - Granular Activated Carbon (GAC)
  - Ion Exchange Resin
  - Biosolids (semi-solid)
  - Reverse Osmosis Reject (high-salt liquid)
  - AFFF Concentrates

Available for grinding of other solid wastes

**Systems are built to order and available for purchase or lease. Contact us for a quote at info@axnano.com**

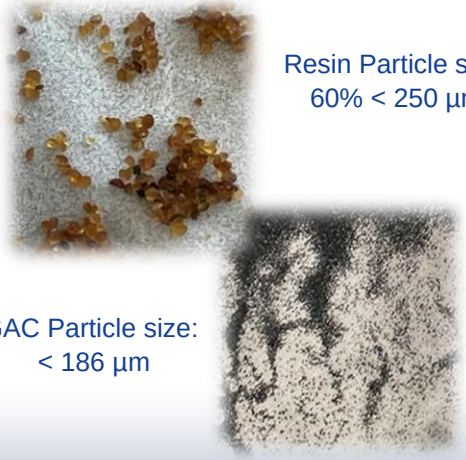
*AxNano successfully tested the prototype AxSure™ system in partnership with General Atomics utilizing their pilot SCWO reactor to process various PFAS-containing waste streams. The AFS effectively reduced 90% of GAC particles from 2mm to <45 µm within hours, while the remaining 10% were below 186 µm, enabling continuous operation of the SCWO reactor. Insights from this project have led to significant improvements of the system.*



Resin Particle Size:
> 600 µm

GAC Particle Size:
2 mm

AFS



Resin Particle size:
60% < 250 µm

GAC Particle size:
< 186 µm
